

CPU-Z is a freeware detection program based on the Panopsys Hardware Detection Engine. This software automatically detects your system configuration and gives you a report on your systems' specifications.

The information page it will generate will include:

- \* Memory information: size, type, timings, specifications.
- \* Processor name and vendor
- \* Core stepping and process
- \* Processor package
- \* Processor current core voltage
- \* Internal and external clocks, clock multiplier
- \* Partial overclock detection
- \* Processor features, including supported instructions sets.
- \* L1 to L3 cache information: location, size, speed, technology.
- \* Motherboard information: name, vendor, BIOS, chipset, memory, AGP.

To use this software, simply extract the file called 'cpuz.exe' to any folder.

Once extracted, double click on it to generate a window which looks like this:

Next, click on the SPD tab to find the details of the memory your system is using. CPU-Z Automatically detects your computer's information and gives you the details you need to purchase a compatible upgrade.

Under the About tab -> Tools Section , you will find a button "Registers Dump(.txt)" , please click the button and save that text file and send this information to us in an email so that we can help you select the right memory upgrade for your computer.
